

Hutch-ALTTPR Tracker

Quick Setup

Prerequisites:

- Retroarch v1.2.2 or higher (setup guide available- <https://github.com/hutchch/RetroArch-Setup>)
- Websocket for SNES (Either SNI or QUSB2SNES)
 - SNI (Works on Windows or MacOS)
 - <https://github.com/alttpr/sni/releases>
 - QUSB2SNES (Works on Windows or MacOS)
 - <https://skarsnik.github.io/QUsb2snes/>
- A Link to the Past v1.0 (JP) .sfc game

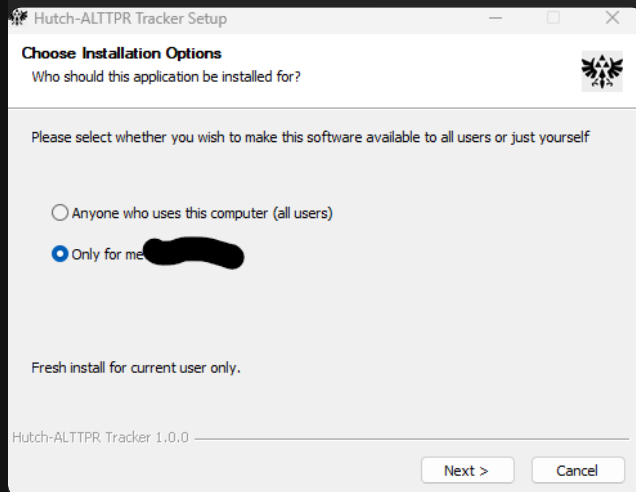

Windows Install:

Download the Hutch-ALTTPR Tracker from <https://github.com/hutchch/ALTTPR-Tracker/releases>

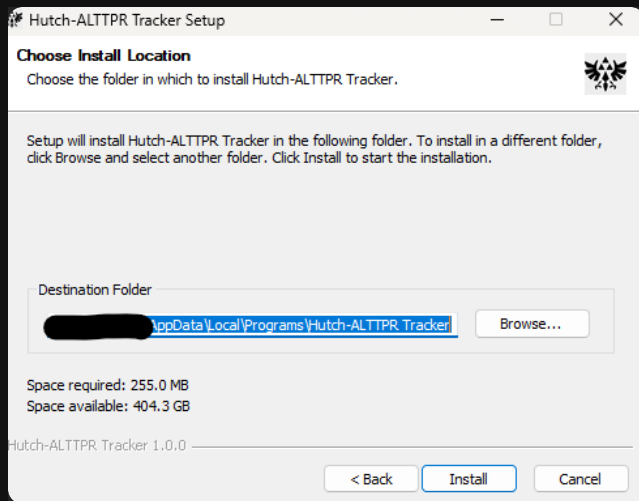

Extract the .zip and run the setup file.

Select either option

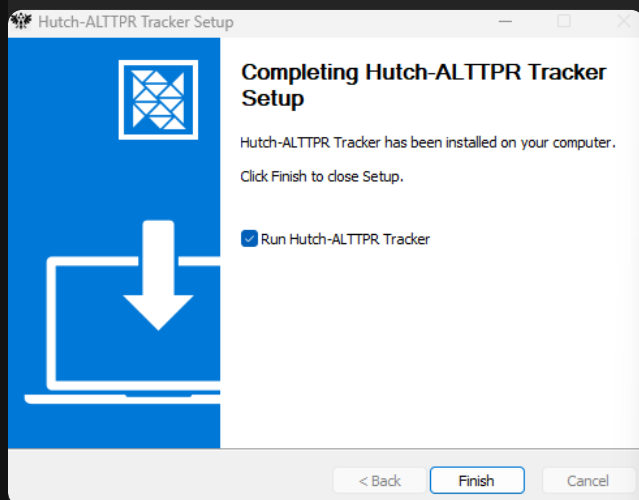

NOTE: Anyone option will require administrator privledges.

Select the destination folder:

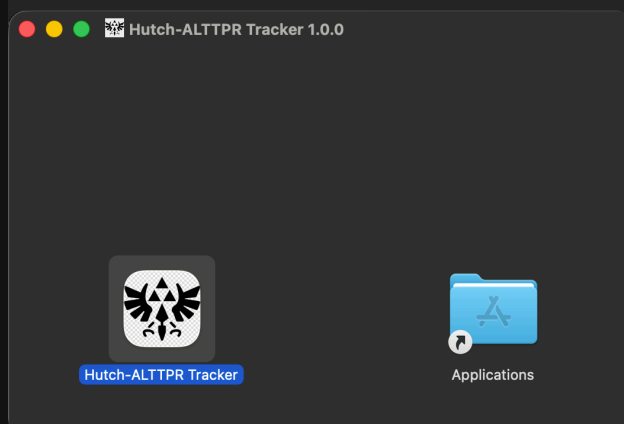

Complete the setup

MacOS Install:

Download the Hutch-ALTTTP Tracker from <https://github.com/hutchch/ALTTTPR-Tracker/releases>

Run the .dmg file and drag the program into the Application folder

Using the Tracker

When Launching, select the game style settings and press the Launch buttons. (The Items/Map can be launched separately if the scaling needs to be adjusted).

Ganon's Tower Crystal Requirement7

Items Only

Map Only

Launch Both

The tracker will connect once the game is launched.

Retroarch using QUSB2SNES needs the SNES bsnes-mercury Core

Nintendo - SNES / SFC (bsnes-mercury Balanced)	[#]
License: GPLv3	
Nintendo - SNES / SFC (bsnes-mercury Performance)	[#]

NOTE: SNES9x will work with QUSB2SNES, but it is deprecated.

Retroarch using SNI needs the SNES bsnes-mercury Core

Once launched, the tracker should connect. If not, hit the reconnect button in the bottom right corner.

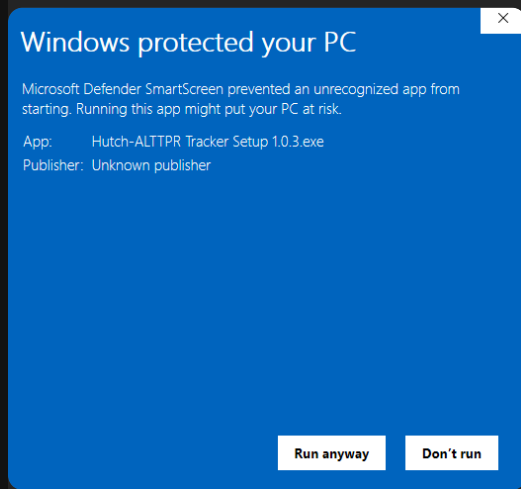

The dungeons are preset to crystals. Left click to cycle through Crystal, Red Crystal, Pendant, or Green Pendant.

To clear a spot on the map, Left click that check.

Note about Windows:

The following may popup during install or upgrade:

Select to run anyways. The publisher certificate is an expensive purchase. All the code is in the main repository if you have any questions.

These files are as-is, and done to help me out. I posted them publically to help others or give ideas on what others can build.

For SRAM mapping http://alttp.mymmm1.com/wiki/ALTPR_SRAM_Map was used. <https://alttpr.com> for your randomizing needs.
